

**VA Water Quality Standards Triennial Review
Ad Hoc Advisory Committee (reconvened)**

February 18, 2009

1 PM

DEQ Piedmont Regional Office Training Room
4949-A Cox Road, Glen Allen, VA
(804) 527-5020

Agenda

I. Welcome & Introductions

II. Reason for reconvening the Committee:

Six issues were identified during Triennial Review in 2007-2008 that required additional consideration. State Water Control Board authorized reconvening the Committee to reconsider these six issues.

III. Brief description of the issues; TAC discussion of initial views

Ammonia criteria
Copper criteria
Cadmium criteria
Cyanide criteria
Lead criteria
Mixing Zone Prohibitions

IV. Detailed discussion of lead conversion factor

DEQ's recommended approach for determining the proper conversion factor for Virginia' water quality criteria.

V. Discussion of approach to other issues and plans for future meetings

Summary of Six Issues

1. **Ammonia:** New toxicity studies on early life stages of freshwater mussels have demonstrated adverse effects at concentrations lower than the criteria levels.
2. **Copper:** New toxicity studies on early life stages of some species of freshwater mussels have demonstrated adverse effects at concentrations lower than the levels of copper allowed for by the current water quality criteria.
3. **Cadmium:** Two new recalculated criteria documents are available. One proposal titled "Addendum to the U.S. EPA Cadmium Water Quality Criteria Document - Technical Review and Criteria Update" (dated 2004) produced by Chadwick Ecological Consultants, Inc on behalf of the Association of Metropolitan Sewerage Agencies (AMSA). Also, a more recent attempt to recalculate the cadmium criteria has been published by the U.S. Geological Survey (USGS), titled; "Cadmium Risks to Freshwater Life: Derivation and Validation of Low-Effect Criteria Values Using Laboratory and Field Studies", December 2006.
4. **Cyanide:** VAMWA has requested that DEQ recalculate the WQC for cyanide based on a report "Scientific Review of Cyanide Ecotoxicology and Evaluation of Ambient Water Quality Criteria: Final Report" (January 2007) produced on behalf of the Water Environment Research Foundation (WERF).
5. **Lead:** This issue involves proper conversion factor to apply to the Virginia aquatic life criteria for lead to convert the criteria concentrations to dissolved concentrations. Virginia recalculated the WQC for lead in 1998-1999 after literature review and using updated database. The basis for the VA 1999 WQC for lead is different than EPA's 1985 WQC.
6. **Mixing Zone Prohibitions:** This issue involves the potential prohibition of mixing zones for persistent bioaccumulative substances for new or expanded dischargers.
